PREFACE

1 ANCIENT MASONRY

1.1 Introduction 1

1.2 History of Masonry Materials 1
   1.2.1 Stone 2
   1.2.2 Clay Units 2
   1.2.3 Calcium Silicate Units 4
   1.2.4 Concrete Masonry Units 4
   1.2.5 Mortars 5

1.3 Early Building Elements 6
   1.3.1 Building Up 6
   1.3.2 Spanning Across 11
   1.3.3 Enclosing Space 17

1.4 Development of Building Structure 20
   1.4.1 Posts and Lintels 21
   1.4.2 Vaults and Domes 21
   1.4.3 Gothic 22
   1.4.4 Single-Story Loadbearing Buildings 25
   1.4.5 Multistory Loadbearing Buildings 25

1.5 Performance of Existing Structures 27

1.6 Restoration and Retrofit of Heritage Structures 29

1.7 Closure 31
2 CONTEMPORARY MASONRY

2.1 Introduction 33

2.2 Masonry Elements 33
  2.2.1 Walls 34
  2.2.2 Columns and Pilasters 39
  2.2.3 Beams and Lintels 41

2.3 Masonry Building Systems 42
  2.3.1 Single-Story Loadbearing Buildings 42
  2.3.2 Multistory Loadbearing Buildings 43
  2.3.3 Hybrid Buildings 45

2.4 Types of Masonry Construction 45
  2.4.1 Unreinforced Masonry 45
  2.4.2 Reinforced Masonry 48
  2.4.3 Prestressed Masonry 51

2.5 Research, Codes and Standards 52

2.6 Sources of Information 54

2.7 Closure 55

2.8 References 55

2.9 Problems 56

3 BUILDING DESIGN

3.1 Introduction 57

3.2 Structural Elements 58
  3.2.1 Design Criteria 58
  3.2.2 Structural Design Loads 60
3.3 Environmental Requirements 76
   3.3.1 Temperature Control 76
   3.3.2 Sound Control 77
   3.3.3 Moisture Control 77
   3.3.4 Fire Control 78

3.4 Aesthetics 78

3.5 Integration of Requirements 81

3.6 Planning the Building 82
   3.6.1 Building Form 82
   3.6.2 Elevation 83
   3.6.3 Plan 86
   3.6.4 Wall Configuration and Layout 88
   3.6.5 Building Irregularities 92
   3.6.6 Floors and Roofs 93
   3.6.7 Connections 96
   3.6.8 Movement Joints and Joints Between Adjoining Elements 98
   3.6.9 Foundations 99

3.7 Economic Aspects 100

3.8 Closure 101

3.9 References 102

3.10 Problems 102

4 MASONRY MATERIALS 105

4.1 Introduction 105

4.2 Common Properties of Masonry Units 106
   4.2.1 Description and Geometry of Masonry Units 106
   4.2.2 Properties of Masonry Units 108

4.3 Clay Masonry Units 113
   4.3.1 Manufacture 113
   4.3.2 Grades 116
   4.3.3 Sizes and Shapes 117
   4.3.4 Compressive Strength 118
   4.3.5 Tensile Strength 119
4.3.6 Absorption Properties 120
4.3.7 Freeze-Thaw Durability 121
4.3.8 Thermal Movement 122
4.3.9 Moisture Expansion 122
4.3.10 Creep 123
4.3.11 Freezing Expansion 123
4.3.12 Selection of Brick Units 123

4.4 Concrete Masonry Units 124
4.4.1 Manufacture 124
4.4.2 Grades, Types and Density 125
4.4.3 Sizes and Shapes 126
4.4.4 Compressive Strength 128
4.4.5 Tensile Strength 129
4.4.6 Absorption 130
4.4.7 Durability 131
4.4.8 Thermal Movement 131
4.4.9 Shrinkage 131
4.4.10 Creep 131

4.5 Calcium Silicate Units 132
4.5.1 Manufacture 132
4.5.2 Grades and Durability 132
4.5.3 Sizes and Shapes 132
4.5.4 Compressive and Tensile Strengths 133
4.5.5 Absorption 133
4.5.6 Thermal Movement, Shrinkage and Creep 133

4.6 Building Stone 133
4.6.1 Groups 134
4.6.2 Sizes, Shapes and Finishes 134
4.6.3 Physical Requirements 134
4.6.4 Durability 136
4.6.5 Thermal Movement 137

4.7 Glass Masonry Units 137

4.8 Special Nonconventional Masonry Units 138
4.8.1 Interlocking Mortarless Units 138
4.8.2 AAC Masonry Units 139

4.9 Mortar 140
4.9.1 Functions of Mortar 140
4.9.2 Mortar Types 140
4.9.3 Properties of Plastic Mortar 142
4.9.4 Properties of Hardened Mortar 143
4.9.5 Mortar Aggregates 147
4.9.6 Admixtures and Colors 147

4.10 Grout 148
4.10.1 Workability Requirements 148
4.10.2 Types 148
4.10.3 Admixtures 150
4.10.4 Compressive Strength 151

4.11 Reinforcement 151
4.11.1 Reinforcing Bars 151
4.11.2 Joint Reinforcement 152
4.11.3 Connectors 153
4.11.4 Prestressing Steels 153
4.11.5 Corrosion Protection 153

4.12 Associated Materials 154
4.12.1 Movement Joint Filler Materials 154
4.12.2 Dampproofing 154
4.12.3 Parging 154
4.12.4 Flashing and Weep Holes 155
4.12.5 Air Barriers and Vapor Barriers 156
4.12.6 Coatings 156
4.12.7 Insulation 157

4.13 Closure 158

4.14 References 158

4.15 Problems 163

5 MASONRY ASSEMBLAGES 165

5.1 Introduction 165

5.2 Axial Compression 166
5.2.1 Introduction 166
5.2.2 Standard Prism Tests 166
5.2.3 General Failure Mechanism 168
5.2.4 Factors Affecting Prism Strength 171
5.2.5 Stress-Strain Relationships 179
5.2.6  Relationship Between Wall Strength and Prism Strength  184
5.2.7  Compressive Strength for Loading Parallel to Bed Joint  184

5.3  Combined Axial Compression and Flexure  185
5.3.1  Introduction  185
5.3.2  Prism Tests  185
5.3.3  General Failure Mechanisms  186
5.3.4  Factors Affecting the Influence of Strain Gradient  186
5.3.5  Compression Stress-Strain Relationship  188

5.4  Flexural Tensile Strength for Out-of-Plane Bending  191
5.4.1  Introduction  191
5.4.2  Test Methods  191
5.4.3  Failure Mechanisms  193
5.4.4  Factors Affecting the Tensile Bond Between Masonry Units and Mortar  195
5.4.5  Factors Affecting the Flexural Tensile Strength of Grout-Filled Hollow Masonry  198
5.4.6  Orthogonal Strength Ratio  200
5.4.7  Biaxial Strength  203

5.5  Shear Strength Along Mortar Bed Joints  203
5.5.1  Introduction  203
5.5.2  Test Methods  204
5.5.3  Failure Modes  204
5.5.4  Relationships Between Shear Strength Along Bed Joints and Normal Compressive Stress  204
5.5.5  Interaction of Shear and Tension Along Bed Joints  206
5.5.6  Factors Affecting the Shear Strength Along Mortar Bed Joints  207
5.5.7  Shear Strengths of Collar Joints and Head Joints  208

5.6  In-Plane Tensile Strength  209
5.6.1  Introduction  209
5.6.2  Test Methods  209
5.6.3  Failure Modes  211
5.6.4  Factors Affecting In-Plane Tensile Strength  211

5.7  Combined Loading and Biaxial Strength  214
5.7.1  Introduction  214
5.7.2  Test Methods  214
5.7.3  Failure Modes  215
5.7.4  Factors Affecting Failure Loads Under Biaxial Compression-Tension Stresses  215
5.8 Examples 217
5.8.1 Example 5.1: Bearing Plate for Prism Test 217
5.8.2 Example 5.2: Selection of Masonry Unit and Mortar 218
5.8.3 Example 5.3: Axial Deformation Under Load 218
5.8.4 Example 5.4: Effect of Grouting in Increasing Joint Shear Strength of Concrete Masonry under In-Plane Loads 219
5.8.5 Example 5.5: Modulus of Rupture of Partially Grouted Concrete Masonry 219
5.8.6 Example 5.6: Effect of Grouting on Increasing Moment Carrying Capacity of Concrete Masonry Under Out-of-Plane Loads 219
5.8.7 Example 5.7: Orthogonal Tensile Strength Ratio of Brick Masonry 220
5.8.8 Example 5.8: Orthogonal Tensile Strength Ratio of Brick Masonry 221

5.9 Closure 222

5.10 References 222

5.11 Problems 229

6 REINFORCED BEAMS AND LINTELS 231

6.1 Introduction 231

6.2 Flexural Behavior and Design 233
6.2.1 Fundamental Assumptions 233
6.2.2 Behavior of Beams with Tension Reinforcement 233
6.2.3 Elastic Analysis of Beams with Tension Reinforcement 235
6.2.4 Strength Analysis of Beams with Tension Reinforcement 237
6.2.5 Design Considerations 240
6.2.6 Example 6.1: Beam Flexural Analysis 242
6.2.7 Example 6.2: Flexural Design 242

6.3 Shear Behavior and Design 244
6.3.1 Shear Cracking (Diagonal Tension Cracking) Behavior 244
6.3.2 Development of Design Methods 245
6.3.3 Example 6.3: Shear Design 250

6.4 Development, Anchorage and Splicing of Reinforcement 251
6.4.1 General Requirements 251
6.4.2 Development Length for Reinforcement 252
6.4.3 Example 6.4: Bond and Development Length 255
6.5  Serviceability Requirements 256
  6.5.1  General 256
  6.5.2  Deflection 256
  6.5.3  Example 6.5: Deflection Calculation 256

6.6  Load Distribution on Lintel Beams 258
  6.6.1  Behavior 258
  6.6.2  Example 6.6: Lintel Beam Loading Example 259
  6.6.3  Software for Lintel Design 259

6.7  Closure 260

6.8  References 260

6.9  Problems 262

7  FLEXURAL WALL

  7.1  Introduction 265

  7.2  Load-Resisting Mechanisms 266

  7.3  Flexural Behavior of Unreinforced Walls 269
    7.3.1  Background 269
    7.3.2  Vertical Flexure (Single-Wythe) 269
    7.3.3  Effect of Superimposed Axial Load 271
    7.3.4  Horizontal Flexure (Single-Wythe) 271
    7.3.5  Two-Way Flexure (Single-Wythe) 274
    7.3.6  Multiple-Wythe Walls 276

  7.4  Analysis and Design of Unreinforced Walls 276
    7.4.1  Introduction 276
    7.4.2  Design from Basic Principles 276
    7.4.3  Yield Line and Failure Line Design Methods 277
    7.4.4  Application of Failure Line Design for Flexural Wall Panels 278
    7.4.5  Example 7.1: Two-Way Bending 281
    7.4.6  Diaphragm Walls 283
    7.4.7  Glass Block Panels 284
    7.4.8  Masonry Partition Walls 284

  7.5  Arching 285
    7.5.1  Mechanics of Rigid Arching 286
8 LOADBEARING WALLS UNDER AXIAL LOAD AND OUT-OF-PLANE BENDING 323

8.1 Introduction 323

8.2 Overview of Status and Trends in Design Provisions 324
  8.2.1 Current Status of Design Provisions 324
  8.2.2 Types of Wall Construction 325

8.3 Analysis and Design under Combined Axial Load and Bending 326
  8.3.1 Stress-Strain Relationships for Masonry and Steel 326
  8.3.2 Design of Unreinforced Masonry 327
  8.3.3 Section Analysis of Solid Unreinforced Masonry 327
  8.3.4 Section Analysis of Reinforced Masonry 330

8.4 Effects of Slenderness 330
  8.4.1 Introduction 330
  8.4.2 TMS 402 Code Provisions for Slenderness 331
  8.4.3 Discussion 337

8.5 Concentrated Loads 337
  8.5.1 Introduction 337
  8.5.2 State of Stress Under Concentrated Loads 337
  8.5.3 Strength Enhancement Factor 337
  8.5.4 Design Provisions 338
  8.5.5 Limiting Compressive Stress for Bearing 339

8.6 Design Examples 339
  8.6.1 Example 8.1: Strength Analysis of Unreinforced Wall Under Concentric Axial Compression 339
  8.6.2 Example 8.2: Design of Concrete Block Wall Under Eccentric Axial and Wind Loads 341
  8.6.3 Example 8.3: Analysis of Bearing Capacity Under Concentrated Load 345

8.7 Closure 346

8.8 References 347

8.9 Problems 348
9 COLUMNS AND PILASTERS

9.1 Introduction 349

9.2 Column Behavior 351
  9.2.1 Introduction 351
  9.2.2 Failure Modes and Compressive Strength 351
  9.2.3 Slenderness Effect 353

9.3 Column Design 353
  9.3.1 Design Considerations 353
  9.3.2 Design of Columns Under Axial Load and Uniaxial Bending 354
  9.3.3 Design of Columns under Biaxial Bending 356
  9.3.4 Seismic Design Considerations 358

9.4 Column Design Examples 359
  9.4.1 Example 9.1: Design of Column Under Concentric Axial Compression 359
  9.4.2 Example 9.2: Eccentrically Loaded Column 361
  9.4.3 Example 9.3: Design of a Column Under Biaxial Bending 362

9.5 Pilaster Design 364
  9.5.1 Introduction 364
  9.5.2 Load Sharing Between Walls and Pilasters 365
  9.5.3 Example 9.4: Pilaster Design Using TMS 402 Strength Design Method 366

9.6 Closure 370

9.7 References 370

9.8 Problems 371

10 SHEAR WALLS

10.1 Introduction 373

10.2 Influence of Types and Layout of Shear Walls 374

10.3 Behavior and Failure Modes 375
  10.3.1 Unreinforced Shear Walls 376
  10.3.2 Multistory Unreinforced Shear Walls 377
10.3.3 Fully Grouted Reinforced Masonry Shear Walls 380
10.3.4 Fully Grouted Reinforced Masonry Shear Walls With Openings 385
10.3.5 Multistory Fully Grouted Reinforced Masonry Shear Walls 387
10.3.6 Partially Grouted Reinforced Masonry Shear Walls 389
10.3.7 Partially Grouted Reinforced Masonry One-Story Buildings 390

10.4 Distribution of Loads to Shear Walls 392
10.4.1 Gravity Loads 392
10.4.2 Lateral Forces 392
10.4.3 Factors Affecting the Distribution of Lateral Loads 395

10.5 Effect of Openings on Wall Rigidity and Force Distribution 397
10.5.1 Horizontal and Vertical Combinations of Shear Wall Segments 397
10.5.2 Rigidity of Walls with Openings in Low-Rise Buildings 398
10.5.3 Example 10.1: Lateral Load Distribution to Walls in a Low-Rise Building 400
10.5.4 Multistory Shear Walls 403
10.5.5 Example 10.2: Forces on Piers in Multistory Walls with Openings 404
10.5.6 Limit Analysis of Reinforced Masonry Shear Walls 405

10.6 Design of Shear Walls 407
10.6.1 Unreinforced Shear Walls 408
10.6.2 Reinforced Shear Walls 410
10.6.3 Special Seismic Design Considerations 414
10.6.4 Moment-Resisting Wall Frames 420
10.6.5 Limit Design of Special Reinforced Masonry Shear Walls 422
10.6.6 Wall Connections 423

10.7 Design Examples 424
10.7.1 Example 10.3: Unreinforced Shear Wall 424
10.7.2 Example 10.4: Reinforced Shear Wall 428
10.7.3 Example 10.5: Pier in a Perforated Wall 430
10.7.4 Example 10.6: Seismic Design of a Perforated Two-Story Reinforced Masonry Shear Wall 433
10.7.5 Example 10.7: Example of Ductility Calculations of a Multistory Shear Wall 436
10.7.6 Example 10.8: Shear Strength of Partially Grouted Shear Walls 439

10.8 Closure 440

10.9 References 440

10.10 Problems 443
11 INFILL WALLS AND PARTITIONS

11.1 Introduction 447

11.2 Infill Walls 448
  11.2.1 Behavior of Participating Infill Not Anchored to Frames for Composite Action 449
  11.2.2 Analysis of Infilled Frames 452
  11.2.3 Strength of Infill Walls 458
  11.2.4 Infill Walls With Openings 460
  11.2.5 Infill Walls With Movement Joints at the Top 460
  11.2.6 Transverse Strength of Participating Infill Walls 462
  11.2.7 Seismic Design Considerations 463
  11.2.8 Example 11.1: Elastic Analysis of the Initial Elastic Stiffness of an Infilled Frame 464
  11.2.9 Example 11.2: Cracked Stiffness of An Infilled Frame 466
  11.2.10 Example 11.3: Design of Infill Wall 467

11.3 Walls Supported on Beams 468
  11.3.1 Introduction 468
  11.3.2 Interaction Mechanism and Failure Modes 468
  11.3.3 Analysis 469
  11.3.4 Limitations of Analysis 471
  11.3.5 Example 11.4: Masonry Wall Supported on a Beam 472

11.4 Closure 473

11.5 References 474

11.6 Problems 476

12 MASONRY VENEER AND CAVITY WALLS

12.1 Introduction 479
  12.1.1 Background 479
  12.1.2 Components of Masonry Veneer and Cavity Walls 480
  12.1.3 Critical Features in Design and Construction 482

12.2 Masonry Rain Screen Walls 485
  12.2.1 Introduction 485
  12.2.2 Design of Masonry Veneer Rain Screens 485
  12.2.3 Additional Precautions to Avoid Rain Penetration 492
12.2.4 Detailing Requirements for Rain Screen Performance  494

12.3 Shelf Angle Supports  496
12.3.1 Design of Anchors for Shelf Angles  496
12.3.2 Example 12.1: Calculation of Anchor Connection  497
12.3.3 Design of Shelf Angles  498
12.3.4 Flashing Materials  499
12.3.5 Construction Details for Shelf Angles  501

12.4 Structural Design Considerations  502
12.4.1 Structural Requirements for Masonry Veneer Walls  502
12.4.2 Structural Requirements for Masonry Cavity Walls  505
12.4.3 Requirements for Ties and Anchors  508
12.4.4 Special Design Considerations for High Seismic Intensity Areas  508

12.5 Design for Movement Joints  509
12.5.1 Horizontal Movement Joints  509
12.5.2 Vertical Movement Joints  510

12.6 Residential Construction of Brick Veneer  511

12.7 Adhered Veneer  511

12.8 Closure  511

12.9 References  512

12.10 Problems  515

13 CONNECTORS  517

13.1 Introduction  517

13.2 Wall Ties  518
13.2.1 Basic Functions  518
13.2.2 Performance Requirements  520
13.2.3 Types of Ties  521
13.2.4 Strength  522
13.2.5 Stiffness  524
13.2.6 Adjustability  525
13.2.7 Design Considerations for Cavity Wall Ties  526
13.2.8 Analysis of Load Distribution  528
13.2.9 Example 13.1: Tie Forces in Cavity Walls  529
13.2.10 Construction Considerations 529
13.2.11 Tie Materials and Corrosion Resistance 531

13.3 Anchors 534
13.3.1 Veneer Anchors 534
13.3.2 Non-Veneer Anchors 536
13.3.3 Design and Construction Considerations 536

13.4 Fasteners 538
13.4.1 Basic Functions 538
13.4.2 Types of Fasteners 538
13.4.3 Strength of Anchor Bolts 538
13.4.4 Design of Fasteners 539
13.4.5 Example 13.2: Anchor Bolt Design 542

13.5 Closure 543

13.6 References 543

13.7 Problems 545

14 FIRE RESISTANCE AND DESIGN FOR ENVIRONMENTAL LOADS 547

14.1 Introduction 547

14.2 Applications of Building Science to Masonry Construction 548

14.3 Fire Resistance 549
14.3.1 Introduction 549
14.3.2 Design Practice 550
14.3.3 Fire-Resistance Rating 550
14.3.4 Methods for Increasing Fire Resistance 555
14.3.5 Other Aspects of Fire Protection 556
14.3.6 Example 14.1: Design for Fire Resistance of a Nonloadbearing Partition 558
14.3.7 Example 14.2: Calculation of Fire Resistance of a Multi-wythe Wall 559

14.4 Thermal Performance 559
14.4.1 Introduction 559
14.4.2 Introduction to Heat Transfer at Building Surfaces 559
14.4.3 Heat Transfer and Thermal Resistance 561
16 DESIGN OF LOADBEARING SINGLE-Story MASONRY BUILDINGS

16.1 General Introduction

16.2 Behavior, Form and Layout
   16.2.1 Wall Layout Requirements for Stability
   16.2.2 Wall Layout to Resist Lateral Loads
   16.2.3 Example 16.1: Lateral Load Distribution for a Rigid Diaphragm Roof System
   16.2.4 Example 16.2: Lateral Load Distribution for a Nonrigid Roof System
   16.2.5 Effect of Shear Wall Deflection on Out-of-Plane Wall Behavior
   16.2.6 Example 16.3: Effect of Top Deflection on Out-of-Plane Bending in Walls

16.3 Design Loads
   16.3.1 Gravity Loads
   16.3.2 Wind Loading
   16.3.3 Seismic Loading

16.4 Design of Components
   16.4.1 Design of Walls for Axial Load and Bending
   16.4.2 Design of Walls for In-Plane Shear and Bending
   16.4.3 Design Requirements for Roof Diaphragms
   16.4.4 Example 16.4: Extra Stiffening of the Roof
   16.4.5 Design of Walls for Hold-Down of Roof Systems
   16.4.6 Example 16.5: Hold-Down of a Roof

16.5 Example Design of Single-Story Building
   16.5.1 Introduction
   16.5.2 Description of the Building
   16.5.3 Design Loads
   16.5.4 Design of a Typical Wall for Axial Load and Out-of-Plane Bending
   16.5.5 Design of Other Walls and Walls with Openings for Axial Load and Out of-Plane Bending
   16.5.6 Design of Walls for Uplift Forces
   16.5.7 Design of Walls for In-Plane Shear and Bending
   16.5.8 Required Stiffness of Roof Diaphragm
17.8 Problems 722
